

environmental data management

Achieve environmental, health, and safety excellence with support from Environmental Data Management, LLC

Environmental Data Management, LLC (EDM) is in the business of helping companies manage their environmental, health and safety (EH&S) compliance and operational commitments.

EDM provides companies with the tools to create, maintain, and improve their Environmental Management System (EMS), including the software to back it up! We specialize in establishing enterprise wide systems that incorporate the elements necessary to keep an operation in

compliance. We focus on the “nuts and bolts” associated with compliance at the front line with a keen eye on management’s goals for an EMS.

EDM is a company comprised of experienced environmental managers who understand the rigors and dynamics associated with day-to-day operations and have designed our products and services to provide valuable practical solutions.

We accomplish this primarily through three service offerings:

ems consulting services

Development of enterprise-wide Environmental Management Systems

eh&s e-business solutions

Helping Manage existing data to improve existing systems

comm-trac™

A software tool designed to manage all tasks associated with an enterprise-wide EMS

The Challenge

America is competing in a global economy where only the most cost effective and responsive business strategies are successful. Of increasing importance are the strategies, which an organization uses to manage environmental risks, threats to human health, and industrial safety. Governmental agencies demand performance and extensive EH&S regulatory requirements exist at the Federal, State, and local levels. These regulations represent the most complex and rapidly changing body of laws in the United States. Further, there are independent "quality and standards setting" non-regulatory bodies that establish additional performance requirements. Shareholders and the public are also concerned that EH&S matters are handled competently.

The Solution

The nation's most effective organizations have realized that the complexity and rate of change of EH&S requirements compels the creation of a focused management strategy. A competent Environmental Management System (EMS) meets this challenge, including all the elements of planning, directing, controlling, reporting, assessing, and improving an EH&S program. Indeed, the creation of an EMS to ensure performance is strongly encouraged by the Office of the President, the EPA, the DOL, and other governmental agencies. EDM can help you develop a solid EMS quickly and efficiently.

ems consulting services

An Environmental Management System (EMS) includes all of the elements of planning, directing, controlling, reporting, assessing, and improving an EH&S program. EDM's goal in EMS consulting is to bring the best concepts and skills to its clients to help them to develop and/or improve their EMS so it operates in the most efficient, cost effective manner possible. Our EMS services include:

- Environmental Management System Gap Analysis Studies
- Regulatory Applicability Determinations
- Regulatory Program Development and Compliance Auditing
- Preparation For Federal and State EH&S Performance Incentive Programs
- Preparation For ISO 14001 Certification
- Pollution Prevention and Lifecycle Analysis
- Due Diligence Studies and Planning associated with:
 - Corporate Restructuring
 - Mergers and Acquisitions
 - Acquisition or Divestiture Audits

eh&s e-business solutions

The complexity of the EH&S function has caused increasing dependence on electronic business (E-Business) solutions. EDM specializes in helping our clients to optimize the processes, software and hardware systems that support effective planning, communication, decision making, reporting, record keeping, and assessment within an effective management structure. Our EH&S e-Business services include:

- Needs Assessment & Gap Analysis
- System Design, Development, Implementation, and Training
- Tracking, Communicating, and Managing new and emerging Legislative and Regulatory Changes
- Preparing Existing Business Systems for EH&S Electronic Integration

- Electronic Preparation And Submittal Of Regulatory Reports
- Use Of Internet/Intranet Resources to maximize EH&S Management Efficiencies
- Tracking, Communicating, and Managing EH&S and Business Metrics

comm-trac™

Environmental compliance just got organized!

Manage all your Environmental, Health and Safety compliance procedures, deadlines and tasks with Comm-Trac™ commitment tracking program from EDM. Now you can get ahead of the compliance curve, and stay ahead once and for all, with Comm-Trac™.

Comm-Trac™ is designed to provide a powerful foundation for an organization's EH&S management system, and will greatly assist in improving overall corporate performance, simultaneously meeting obligations to shareholders, customers and the community.

Based on input from our existing customers, EDM has enhanced Comm-Trac™ to include additional components and capabilities, including user defined fields and flexible page formatting, so the system can be formatted to fit the structure of your existing EMS. In addition, our system can link directly to other applications within your organization to tie any existing compliance tools together in one comprehensive "dashboard". Tight document control is an important component of an EMS, and Comm-Trac™ can maintain the entire document in one file, yet attach individual sections of the document to specific commitments and/or tasks.

Take a look at Comm-Trac™. We guarantee you will like what you see.
